OVERVIEW ............................................................................................................... 17

## CHAPTER 1  GENERAL INTRODUCTION

DEFINING PAIN ................................................................. 22

  Pain theories ........................................................................................................... 24

ADJUSTMENT ................................................................. 26

  Coping ................................................................................................................... 26

  Quality of life ....................................................................................................... 30

  Symptoms of depression ...................................................................................... 32

FACTORS THAT INFLUENCE ADJUSTMENT TO PAIN ......................... 34

  Pain characteristics in cancer ............................................................................. 34

  Other non-pain symptoms .................................................................................. 40

  Psychological factors ......................................................................................... 41

  Positive and negative emotions ......................................................................... 42

  Meaning of pain .................................................................................................. 44

  Perception of pain management effectiveness .................................................... 48

  Potential moderators of pain, other symptoms and adjustment ......................... 51

SUMMARY ................................................................. 52

PLAN FOR THE THESIS ......................................................................................... 54
CHAPTER 2 RELATIONSHIPS BETWEEN PAIN, OTHER SYMPTOMS, PSYCHOLOGICAL FACTORS AND ADJUSTMENT

INTRODUCTION ........................................................................................................... 57
Overview .................................................................................................................. 57
Prevalence of pain .................................................................................................. 59
Adjustment outcomes ............................................................................................. 60
Level of coping ........................................................................................................ 60
Quality of life ........................................................................................................... 61
Factors that influences adjustment ......................................................................... 62
Pain characteristics ............................................................................................... 62
Other symptoms ..................................................................................................... 63
Psychological factors ............................................................................................ 64
Potential moderators of pain, other symptoms and adjustment .......................... 65
Time ......................................................................................................................... 66
Methodological issues in the study of pain in palliative care ............................... 66
Sample ...................................................................................................................... 67
Nature of the data .................................................................................................. 67
Challenges for measurement by collateral source ............................................. 68
Place ......................................................................................................................... 69
Time of data collection ........................................................................................ 69
Use of archival data .............................................................................................. 70
Summary ................................................................................................................ 71

METHOD .................................................................................................................. 73
Participants ............................................................................................................. 73
Measures ............................................................................................................... 79
Predictor variables .............................................................................................. 79
Adjustment Outcomes .......................................................................................... 80
Procedures ............................................................................................................. 81
Statistical analysis plan ......................................................................................... 82
Data reduction for psychological factors ............................................................ 82
Conclusion .............................................................................................................. 84

RESULTS ................................................................................................................ 86
Preliminary analyses ............................................................................................. 86
Missing data .......................................................................................................... 86
Descriptive analyses ............................................................................................ 87
Predictor variables at the initial interview .......................................................... 87
Stability of predictors over time ................... 89
Outcome variables at the initial interview ...... 89
Stability of outcomes over time ................. 90
Main analyses .......................................................... 90
Predictors of patient coping at the first interview .... 91
Predictors of patient coping at subsequent interviews ... 95
Predictors of quality of life at the initial interview ...... 98
Predictors of quality of life at subsequent interviews .. 100
Summary of results .................................................. 104

DISCUSSION .......................................................... 106

CHAPTER 3 INFLUENCE OF BREAKTHROUGH PAIN
PSYCHOLOGICAL FACTORS AND ADJUSTMENT

INTRODUCTION .................................................. 115
Experience of pain .................................................. 116
Breakthrough pain ................................................. 116
Prevalence of breakthrough pain ......................... 117
Adjustment to pain ................................................. 119
Measures of adjustment ........................................... 119
Factors which influence adjustment ......................... 121
Breakthrough pain characteristics ......................... 122
Psychological factors .............................................. 123
Meaning of cancer pain .......................................... 124
Measuring meanings of illness ............................... 125
Measuring meanings of cancer pain ................. 128
Relationship between meaning of cancer pain and adjustment in palliative care ....... 129
Perceived effectiveness of pain ............................... 130
management strategies ......................................... 130
Potential moderators of breakthrough pain and adjustment ........................................ 132
Meaning of pain ....................................................... 132
Perceived effectiveness of pain management strategies ........................................ 133
Summary .............................................................. 134

Model to be tested .................................................. 135

METHOD ............................................................ 138
Participants .......................................................... 138
Measures ............................................................. 140
CHAPTER 4 FURTHER EXPLORATION OF THE INFLUENCE OF BREAKTHROUGH PAIN PSYCHOLOGICAL FACTORS AND ADJUSTMENT

INTRODUCTION..........................................................161
  Adjustment............................................................161
    Level of coping ................................................162
    Symptoms of depression ......................................162
  Factors that influence adjustment .............................163
    Breakthrough pain characteristics ........................164
    Psychological factors .........................................164
      Meaning of pain in cancer ...............................165
    Perceived pain management effectiveness ..............166
  Potential moderators of breakthrough pain and
    adjustment .......................................................166
  Summary ..........................................................166

METHOD...............................................................170
  Participants ......................................................170
  Measures ........................................................173
    Predictor variables ..........................................173
    Outcome variables ..........................................174
  Procedures ......................................................176
  Statistical analysis ..........................................176

RESULTS.............................................................177
  Preliminary analyses ..........................................177
  Descriptive statistics .......................................177
  Exploratory analyses ........................................182
  Main analyses .................................................184

DISCUSSION..........................................................191
CHAPTER 5 MEANING OF PAIN – A PERSON-FOCUSED QUALITATIVE STUDY

INTRODUCTION ........................................................................................................... 201
   Meaning of pain ................................................................................................. 202
   Why use a qualitative approach? ................................................................. 202
   Grounded theory ............................................................................................... 203

METHOD ....................................................................................................................... 207
   Participants ......................................................................................................... 207
   Measures ............................................................................................................. 207
   Procedures .......................................................................................................... 209
   Qualitative data analysis .................................................................................. 209

RESULTS AND DISCUSSION ....................................................................................... 214
   Development of codes and categories ............................................................. 214
      Meanings ascribed to pain ............................................................................ 215
         Pain as loss .................................................................................................. 215
         Pragmatic responses to pain ...................................................................... 220
         Pain as a source of fear/worry .................................................................. 222
         Pain as a challenge ..................................................................................... 224
         Pain as injustice .......................................................................................... 226
         Pain as a threat/enemy .............................................................................. 227
         Pain as a nuisance ....................................................................................... 228
         Pain as a relief .............................................................................................. 229
         Pain in the context of gratitude for life ....................................................... 230
         Pain as an experience of value ..................................................................... 231
         Pain as punishment ..................................................................................... 232
         Pain as a weakness ...................................................................................... 233
         Pain in the context of spirituality ................................................................. 234

      Summary of emerging categories ............................................................... 235
   Case studies showing patterns between meanings of pain ................................ 233
      Patterns in content ......................................................................................... 236
         Single category ........................................................................................... 236
         Two categories ............................................................................................. 236
         Multiple sub-categories within one meaning .............................................. 237
         Multiple categories ..................................................................................... 238
      Relationship between meaning of pain and meaning of cancer ................. 239
      Congruency of categories ............................................................................ 240
Patterns of process.........................................................241
   Brief themes or elaborated reporting
   of categories.................................................242
   Level of emotion in reporting categories..............243
   Evidence of coping strategies..........................244
   Contextualising pain.......................................244
   Balancing positive and negative aspects of
   pain..................................................................245
Summary of findings..................................................246
Reflective Practice.....................................................246
Grounded theory (GT) of meaning of pain .............252
Limitations..............................................................259
Extensions to the Understanding of Meaning of Pain.....260
Conclusion..............................................................261

CHAPTER 6 RELATIONSHIPS BETWEEN BREAKTHROUGH
PAIN, PSYCHOLOGICAL FACTORS
AND ADJUSTMENT - A PERSON-FOCUSED PERSPECTIVE

INTRODUCTION..........................................................263
   Stability in breakthrough pain and coping..............263
   Comparisons between summative data and diary data about
   breakthrough pain and coping............................265
   Relationships between breakthrough pain characteristics,
   meaning of pain and coping...............................266
Research Questions..................................................268

METHOD.................................................................269
   Participants.......................................................269
   Measures.........................................................270
   Procedures.......................................................270
   Analysis plan...................................................274
RESULTS...............................................................275
   Part one............................................................275
      Stability of pain and coping over 5 or more days......275
      Comparisons between summative reports and diary
      reports of breakthrough pain and coping................288
   Part Two............................................................290
      Breakthrough pain characteristics, coping and meaning
      of pain..........................................................290
      Aversive meanings of pain................................290
      Non-aversive meanings of pain.........................293
DISCUSSION

CHAPTER 7  FINDINGS AND CONCLUSIONS
