

**The shell mounds of Albatross Bay: an archaeological
investigation of late Holocene production strategies near
Weipa, north eastern Australia**

**Michael Morrison
BA (Hons)**

A thesis submitted for the degree of Doctor of Philosophy

ABSTRACT	XVII
STATEMENT OF SOURCES	XIX
ACKNOWLEDGEMENTS.....	XX
CHAPTER 1: INTRODUCTION	1
1.1 Shell mounds and the question of change in late Holocene northern Australia	4
1.1.1 Long-term models.....	5
1.1.2 Short-term models.....	9
1.1.3 Research questions: the bigger picture.....	12
1.2 The study area.....	12
1.3 Shell matrix sites and gatherer-hunter production strategies at Albatross Bay.....	15
1.4 Structure of the thesis.....	20
CHAPTER 2: THE STUDY AREA.....	23
2.1 Contemporary environments.....	23
2.2 Holocene palaeo-environments.....	35
2.2.1 Post-glacial sea level changes	35
2.2.2 Late Holocene coastal dynamics at Albatross Bay	42
2.2.3 Climate and vegetation.....	43
CHAPTER 3: ETHNOHISTORIC INSIGHTS	51
3.1 Theoretical perspectives	52

3.2 A brief history	54
3.3 Sources of data	58
3.4 Demography and social organisation	60
3.5 The cultural landscape	63
3.5.1 Places of significance	64
3.5.2 Resource opportunities and scheduling.....	68
3.6 Material culture	75
3.7 Social dimensions of production.....	80
3.7.1 The scale of production.....	80
3.7.2 Organisation of labour	85
3.7.3 Control of access to resources.....	87
CHAPTER 4: ARCHAEOLOGICAL CONTEXT	92
4.1 Terminal LGM to mid- Holocene.....	93
4.2 Albatross Bay	95
4.2.1 Previous research	96
4.2.2 Models and interpretations.....	107
4.3 The Torres Strait Islands	110
4.4 Princess Charlotte Bay	112
4.5 Mainland south east Cape York.....	117
4.6 Other regions.....	122
4.6.1 The Aurukun region	122
4.6.2 Northern Peninsula Area.....	125
4.6.3 Rock art.....	125

4.7 Discussion	127
-----------------------------	------------

CHAPTER 5: METHODOLOGY132

5.1 The regional archaeological database	132
---	------------

5.1.1 Available data sources	132
5.1.2 Site classification	135
5.1.3 Data quality and site numbering	137

5.2 Field survey methods.....139

5.2.1 Survey strategy.....	141
5.2.2 Survey and recording methods.....	142

5.3 Excavation and analysis methods.....143
--

5.3.1 Sampling strategy.....	144
5.3.2 Excavation procedures	145
5.3.3 Laboratory analysis	149
5.3.4 Shellfish analysis.....	150
5.3.5 Artefacts	152

CHAPTER 6: THE REGIONAL ARCHAEOLOGICAL RECORD154

6.1 The archaeological database	154
--	------------

6.2 Shell matrix sites	159
-------------------------------------	------------

6.2.1 General characteristics	160
6.2.2 Distribution	162
6.2.3 Morphological characteristics	163
6.2.4 Surface composition estimates.....	164
6.2.5 Substrates	165

6.3 Earth Mounds	171
-------------------------------	------------

6.4 Stone artefacts.....174

6.5 Summary.....	179
CHAPTER 7: <i>BWEENING</i> 184	
7.1 Background	187
7.2 SM:137	192
7.2.1 Description	192

Abstract

This thesis presents the results of an archaeological investigation of shell matrix sites, and in particular, shell mounds sites that occur around the shores of Albatross Bay, near Weipa on the north western Cape York Peninsula, northern Australia. It is the contention of this thesis that earlier approaches to the investigation of shell mound sites in northern Australia have tended to place too much emphasis on developing long-term explanatory models that gloss over explanations for the specific roles of these unique sites in past economic systems. While long-term explanations represent important contributions, it is argued here that short-term decadal scale modelling of the production systems associated with shell mound formation and use are required in order to fully understand the significance of the mid- to late Holocene emergence of these types of sites. A focus on production – defined in a substantive economic sense – is a suitable avenue through which archaeologists can expand our understanding of the role of these features in past gatherer-hunter societies, and their broader importance on longer-term time scales

The thesis thus develops a detailed model of the production strategies associated with the formation of shell mound sites that occur around Albatross Bay, while also considering the broader significance of this model, particularly within the context of Cape York Peninsula. It presents the results of field surveys and excavations carried out around Albatross Bay by the author, as well as a detailed review and analysis of work carried out by others. It is argued that shell mounds are the result of relatively specialised production activities focussing on a very specific resource base: mudflat shellfish species. Shell mounds offered a range of unique benefits for people engaged in these specialised activities, including as camp sites and as specialised activity

areas. These events were inherently flexible in size and in terms of timing, reflecting the dynamic nature of the resource base itself; yet the flexible nature of this production strategy also enabled more regular small scale social gatherings, along with a range of social and economic benefits to participants, than would have been otherwise possible. It is proposed that these types of strategies may represent an important characteristic of the production systems employed by gatherer-hunter peoples in late Holocene Cape York.

Overall, this thesis makes a significant contribution to both our understanding of late Holocene lifeways at Albatross Bay as well as to our understanding of the broader significance of the emergence of shell mound sites in Cape York. Furthermore, it highlights the range of insights that can come from a focus on short-term modelling of gatherer-hunter lifeways alongside approaches oriented toward longer-term explanations of economic, social and environmental change.

Statement of Sources

Declaration

I certify that this thesis does not incorporate without acknowledgment any material previously submitted for a degree or diploma in any university; and that to the best of my knowledge and belief it does not contain any material previously published or written by another person except where due reference is made in the text.

Acknowledgements

A large number of people have contributed in many ways to the production of this thesis and here I would like to briefly thank them.

Above all, my sincere gratitude goes to the Indigenous custodians of the broader Albatross Bay area without whose support and permission this work could simply not have been undertaken. During the field surveys I thoroughly enjoyed working with *Thapitch* (Mrs A. Heinemann), Nicholas Heinemann, Beatrice Gordon, Suzie Madua, Florence Hector, Ivy Gordon, Robert Madua Senior, Ronnie John, Dr Thancoupie Fletcher, Maryanne Coconut, Mervyn Wales, John Mango, Florence Hector, Ivy Gordon, Thelma Coconut, Stanley Coconut, Steven Hall, Gracie John, Ronnie Hall, Richard Barkley and Bernice Mango. Excavation work at *Prunung* was permitted and supported by Senior Elders Gracie John and Richard Barkley, and that at *Bweening* was permitted and supported by Senior Elders Bernice Mango, John Mango and Steven Hall. A special thanks to Mr and Mrs Heinemann for taking me under their wing and for sharing so much of their knowledge about culture, history and Country.

Dr John von Sturmer, Dr John Taylor, Professor Geoff Bailey, Professor Peter Sutton, Dr Sean Ulm, Professor Paula Reimer , Dr Robin Sim, Dr Mike Rubenach, Professor Sue O'Connor, Dr Harold Voris, Professor Atholl Chase, Dr Alan Hogg, Dr Fiona Petchy, Dr Nicky Horsfall and Mr Geoff Wharton all have kindly provided specific support and advice on various problems and requests throughout my candidature. I would also like to also acknowledge the support and encouragement I received from the late Dr Bruce Veitch who provided important advice on excavating shell mound deposits during the early stages of this research. I have also enjoyed working with and discussing the archaeology of the region with Dr Justin Shiner; I thank him for this and also for access to some of the Rio Tinto-Alcan data used in this thesis.

Dr Shelley Greer was my principal supervisor at James Cook University where I started my PhD: I thank her for her early support, encouragement and her thoughts on an early draft of this thesis. I am also grateful to Associate Professor Peter Veth who initially encouraged me to take up research in the region and was instrumental in establishing and setting the direction of my project. Dr Martin Gibbs and Dr David Roe both encouraged my work and helped spark the final surge of enthusiasm required to finish. I also enjoyed innumerable conversations with many who passed through or were based at JCU between 2002 and 2003. In particular I would like to acknowledge Dr Kevin Tibbett, Dr Brad Duncan, Dr Adam Brumm, Dr Melissa Carter, Dr Darlene McNaughton, Dr Celmara Pocock, Dr Sally Babidge, Dr Jane Harrington, Dr Lynley Wallis, Ewen McPhee, Ed Slaughter, John Edgar and Ross Stanger. Darlene, Ewen, Melissa, Ed and Ross also all variously assisted with fieldwork and lab analysis.

My family have had a great bearing on the production of this thesis. My mother (Jan) and father ('Snow') taught me much over the years, but the two things that have served me best were the value of an honest days hard work and how to listen with an open heart and mind. My younger sister (Leisa) and brother (Andrew) have also

supported, encouraged and assisted me in many ways and my uncles Barry and Clive both encouraged and fostered my interest in Indigenous archaeology from a very young age. In addition, our close friends Dundi and Colin Mitchell have provided frequent generous helpings of support, guidance and delicious Hungarian cuisine during the final stages of writing. My sincere love and thanks to you all.

Dr Roger Cribb supported my initial research at Weipa and I can only express sadness that the thesis could not be completed in time for him to see the final product. Roger introduced me to the Napranum community and provided a robust introduction to the archaeology and contemporary history of the region. I was fortunate to have spent many months in the field with Roger and in the process had innumerable interesting experiences: some frustrating, others comical, a few life threatening; but now, in hindsight and from the safety of my office, I consider them to have all been valuable.

Since coming to Flinders University in late 2007 to complete my PhD I have been very fortunate to receive ongoing support and guidance from my principal supervisor Dr Lynley Wallis. There is little question this thesis may have never come to fruition – and most certainly would have been a very different document – were it not for Lynley’s intellectual generosity, editing wisdom, and knowledge of and passion for archaeology. The detailed, timely and consistent feedback on drafts has made completing this thesis a much easier task than I ever expected it to be. I also thank my secondary supervisor Dr Alice Gorman for her comments and feedback on an early draft.

Finally, I would like to thank my wonderful partner Dr Darlene McNaughton for her support, love, patience and intellectual generosity. She has supported me during my many, many diversions from my thesis research, yet has also applied a constant yet subtle pressure to complete. There is little doubt that her passion for anthropology and history has rubbed off on this work – and me – and I think the final thesis is all the better for it. Thank you for everything my darling.

In acknowledging the support, encouragement and advice I have received in the preparation of this thesis I also should state that unless otherwise acknowledged, the ideas and arguments presented here are my own. I am also solely responsible for any errors or omissions this thesis may contain.
