DECLARATION

I certify that this work does not incorporate without acknowledgement any material previously submitted for a degree or diploma in any university; and that to the best of my knowledge and belief it does not contain any material previously published or written by another person except where due reference is made in the text.

Ferdousi Akhter
(Student ID 2043536)
Adelaide, November 2007

I believe that this thesis is properly presented, conforms to the specification for thesis presentation in the university, and is prima facie worthy of examination.

Dr. Gour Dasvarma

Acknowledgements

First of all I would to express everlasting gratitude to almighty **Allah** who enabled me to finish this thesis.

I owe a special dept of gratitude and honour to my supervisor **Dr. Gour Dasvarma** for his diligent support, encouragement, enthusiasm and countless hours of beneficial discussion on this thesis. It was impossible to complete this without his thoughtful guidance.

Special thanks go to my course coordinator **Dr. Yvonne Corcoran-Nantes** for her continuous inspiration to go ahead with my thesis. My special thanks also go to **ORC Macro Inc.** for giving me the access to their website to use the 2001 Bangladesh Maternal Mortality and Maternal Health Survey, and the 2004 Bangladesh Demographic and Health Survey data which I have used in my thesis. My cordial thanks go to **Ms. Kylie Lange** and **Md. Rezaul Islam** for their invaluable help in data analysis using the SPSS software.

I would further like to express my honest and sincere thanks to **Ms. Elaine Kane** and her colleagues at the International Student Service Unit (ISSU) and staff at the Department of Women's Studies at Flinders University for their kind support and assistance to complete this course successfully.

I am really grateful to my husband **Md. Rezaul Islam** and son **Nuh Tasneen Nuha** for their moral support, especially as I could not give enough time and due attention to my new born son due to academic pressure. My gratitude also goes to my parents and other family members for their inspiration and boundless support for further study overseas.

I would like to thank all of my friends for their valuable support and encouragement during my study at Flinders University.

Finally, I am sincerely thankful to **AusAid** for providing me with a scholarship and to the Flinders University of South Australia for giving me this opportunity to study in Australia.

ABSTRACT

The main objective of the study is to analyze the role of family planning program in reducing maternal mortality in Bangladesh. A conceptual framework has been developed in which family planning is shown to be integrated in reducing maternal mortality. This study found that the risk factors of maternal mortality e.g. unwanted pregnancy, high parity, and early and old age at child birth still prevail in Bangladesh. It is hypothesized that the prevalence of these factors can be substantially reduced by a proper practice of family planning. There is a high level of unmet need for family planning Bangladesh, and its removal will substantially help in reducing maternal mortality in the country.

The risk factors of maternal mortality are strongly associated with lack of family planning practice and other socio-economic and demographic background characteristics of women. By using data from the Bangladesh Demographic and Health Survey (BDHS) of 2004 and the Bangladesh Maternal Health and Maternal Mortality Survey (BMMS) of 2001 the study has analyzed the relationship of the risk factors of maternal mortality, namely wantedness of pregnancy, age at child birth, parity and birth interval with various socio-demographic factors. The analysis has shown that use status of family planning is influenced by the risk factors of maternal mortality. Wantedness of pregnancy has been found to be significantly related with age at birth, parity and birth interval. It has been also found that the risk factors of maternal mortality also affect on antenatal care.

The study has identified some policy implications regarding family planning and maternal mortality, and has made appropriate recommendations. One of the major aspects of the strategies to reduce maternal mortality through family planning is to provide family planning services to all women, regardless of any

group affiliation. Fulfilment of unmet for family planning has been recommended as an important strategy to reduce maternal mortality in the country. In addition, it is also recommended to raise the age at marriage and child birth, to space births and to limit family size by empowering women through education.

CHAPTER ONE: INTRODUCTION

1.1. Background	1
1.2. The health and family planning programs in Bangladesh	4
1.3. The Millennium Development Goals for Bangladesh	6
1.4. The research question	8
1.5. Research objectives	9
1.6. Rationale of the study	10
1.7. Research framework and organization of the thesis	10

CHAPTER TWO: METHODOLOGY OF THE STUDY

2.1. Data sources	12
2.1.1. Bangladesh Demographic and Health Survey 2004 (BDHS 2004)	12
2.1.2. Bangladesh Maternal Health Services and Maternal Mortality Survey 2001 (BMMS 2001)	14
2.2. Data quality	15
2.3. Data management	16
2.4. Method of analysis	16

2.5. The identification and operationalisation of variables	17
2.6. Conclusion	19

CHAPTER THREE: REVIEW OF THE LITERATURE AND CONCEPTUAL FRAMEWORK ON FAMILY PLANNING AND MATERNAL MORTALITY

3.1. Literature review	21
3.1.1. Conceptual issues related to maternal mortality	21
3.1.2. Levels and trends of maternal mortality, fertility and contraceptive prevalence in Bangladesh	26
3.1.3. Issues related to family planning in reducing maternal mortality	31
3.2. Family planning a strategy for reducing maternal mortality	34
3.3. Historical and present interventions to avert maternal mortality and to formulate family planning program	38
3.4. A conceptual framework linking family planning with the reduction of maternal mortality	40
3.5. Risk factors of maternal mortality: wantedness of pregnancy, age at child birth, parity and birth interval	46
3.5.1 Wantedness of pregnancy	47
3.5.2. Age at child birth	51
3.5.3. Parity	54
3.5.4. Birth intervals	56
3.6. Conclusion	58

CHAPTER FOUR: ANALYSIS OF THE RISK FACTORS OF MATERNAL MORTALITY IN BANGLADESH

4.1. Differentials in using family planning in relation to the risk factors of maternal mortality: results of a bivariate analysis	61
(a) Use status of contraception and age at last child birth	63
(b) Use status of contraception and birth interval	63
(c) Use status of contraception and parity	64
4.2. Factors influencing the risk factors of maternal mortality: wantedness of last pregnancy	65
4.2.1. Immediate factors contributing to wantedness of last pregnancy: results of a bivariate analysis	65

(a)	Use status of contraception and wantedness of pregnancy	66
4.2.2.	Demographic and socio-economic factors contributing to wantedness of last pregnancy: Results of a bivariate analysis	67
(a)	Age at last child birth and wantedness of last pregnancy	67
(b)	Age at marriage and wantedness of the last pregnancy	68
(c)	Fertility preference and wantedness of the last pregnancy	69
(d)	Number of children ever born and wantedness of the last pregnancy	70
(e)	Outcomes of previous to last pregnancy and wantedness of the last pregnancy	71
(f)	Education and wantedness of the last pregnancy	72
(g)	Desired family size and wantedness of last pregnancy	73
(h)	Wealth index and wantedness of the last pregnancy	74
4.3.	Factors associated with age at last child birth: results of bivariate analysis	76
(a)	Wantedness of the last child birth and age at last child birth	76
4.4.	Factors contributing to parity: results of a bivariate analysis	78
4.5.	Factors contributing to birth intervals: results of a bivariate analysis	79

CHAPTER FIVE: MULTIVARIATE REGRESSION ANALYSIS OF SELECTED FACTORS CONTRIBUTING TO MATERNAL MORTALITY

5.1.	Factors influencing wantedness of pregnancy: results of logistic regression analysis	83
5.2.	Factors influencing the receipt of antenatal care (ANC) and the number of ANC visits: results of logistic regression analysis	88
a)	Factors contributing to receiving antenatal care: results of a multivariate analysis	89
b)	Factors contributing to the number of antenatal visits: results of a multivariate analysis	93

**CHAPTER SIX: CONCLUSION: DISCUSSION OF FINDINGS AND
RECOMMENDATIONS**

6.1. Discussion of major findings of the study	98
6.2. Policy implications	108
6.3. Limitations of the study and suggested future research directions	110
