## **Abstract**

---

In Singapore schools, assessment of learning practices have been dominant in shaping everyday classroom instruction. However, in the international literature, increasing emphasis has been placed on the role of assessment for learning (AfL) in effective teaching and learning. One reason for this is that AfL is claimed to enhance teachers' identification of and response to students' learning needs. Also, AfL has been argued to enhance student engagement and self-directed learning. The present research involved the introduction and implementation of some core AfL strategies such as peer feedback, student self-reflections, goal setting, use of performance standards, and teacher written feedback in one school context in Singapore as an intervention. As a result of the intervention, evidence of change and impact on (a) teachers' behaviours, attitudes and beliefs and (b) students' behaviours, attitudes and beliefs were examined. Positive changes included students taking more ownership and responsibility for their learning as they began to understand the language of assessment and learned what they 'know and do not know' and taking actions to address their learning needs. Possible links between AfL experiences and summative examination performance were included in the research. Finally, the research and its results revealed some of the possible barriers to a greater use of assessment for learning in Singapore, which helped formulate recommendations for sustaining AfL practices.

I am very grateful to my supervisor, Emeritus Professor Alan Russell for his patience, commitment, guidance, encouragement and seemingly tireless checking and advising that is always so helpful and very much appreciated. Alan is an exceptional mentor from whom I have learnt much about research and the art of writing. It has truly been a privilege to have conducted this research under his guidance.

I would also like to acknowledge the support of Associate Professor Kerry Bissaker during the initial stage of this research and Associate Professor David Curtis for his views about quantitative analysis. Special thanks to Dr Robert Muller for his editorial assistance. Professional editing for the thesis was limited to grammar and style according to the Australian Standard for Editing Practice (ASEP). This did not alter or improve the content or the conceptual organisation of the thesis.

I thank everyone involved in this research, specifically the Principal, teachers and students of Fairmont Secondary School. Without the support and enthusiasm of their participation, carrying out this research would not be possible. Special thank you to Fairmont Secondary School's office support staff who are always ready to help me get what I want.

Finally, this thesis is dedicated to my family – my greatest support. To my Abah and Ammi, you are my inspiration that motivated me to begin and end this quest. I hope I have fulfilled Abah's wish to have both his children to be called 'Doctor'. To my brother, Dr. Razmi, thank you for taking over the responsibility to take care of our parents. To my sister-in-law, niece and nephews, thank you for making me feel at home here in Adelaide.

My deepest appreciation goes to my husband, Danial who had put his career on hold and relocate to Adelaide just to support me financially and emotionally. I am deeply grateful for your love, continued support, patience and encouragement to achieve my dreams.

Thank you God for everything.
